### **NTC gives long term consistency to its ophtha portfolio with another MDR CE Certificate approval**

**Milano, 30 May 2024** – NTC, an International pharmaceutical company with headquarter in Italy, with a specific focus in ophthalmology and with a significant portfolio in gynecology and gastroenterology too, continues in its certification path and receives the fifth Medical Device Regulation (MDR) Certificate approval, this time for its hypertonic ophthalmic solution based on NaCl 5% multidose.

NTC started back in 2018 its activity plan to successfully carry its 32 Technical files of medical devices - representing north of 200 SKUs in Europe only - from the EU directive to Medical Device Regulation 2017/745 (MDR).

“To build a strong foundation and unleash sustainable growth in the future”, states Riccardo Carbuicchio CEO of NTC, “we have proactively moved ahead already time ago and begun working towards meeting MDR requirements and obtaining CE marks renewals for our medical devices, according to the new EU regulation, before the deadlines. In this way, we have been trying and keep trying to secure our portfolio and give long term continuity to the agreements in place with our customers, for the benefits of many patients in the many countries where our products are marketed.”

MDR intends to secure effective and safe medical devices, adequately documented, to the markets and set new standards for clinical trials too. Besides this, it provides a regulatory framework, supporting innovation and competitiveness of the medical device industry in the EU.

Silvia Regondi, Chief Operating Officer of NTC says: “The partnerships with our contract manufacturing organizations together with the expertise of our R&D, Quality, and Regulatory departments are enabling us to sustain our innovative therapeutic solutions meant to satisfy unmet medical needs for patients in Europe and beyond. We are following very respectfully the feedback we are receiving from regulatory bodies during the registration path. ”

NTC adds another brick to its credibility delivering good quality files, in the context of this very important transformation in the medical device regulation in Europe.
